

Equipment Hub

Connected Worker Platform for Material Handling & Industrial Automation

SANTECH · 2026

Stick a QR code on every piece of warehouse equipment. A tech scans it with any phone and instantly sees **the right manual, the right parts list, the right procedure, and the right training** for that exact machine — sectioned per part, scoped per serial, audited at every interaction. Three-sided: OEMs, integrators, and end-customers each pay for different value from the same physical QR.

Beta — Q3 2026

Five hand-selected MHI partners. SANTECH authors content, ships QR labels, runs weekly check-ins. **~\$25k value, \$0 to participate.** Founding-member: 50% off list, locked 24 mo.

1

Scan & Identify

One QR scan resolves the exact serial number. Brand-aware UI shows model, content revision, install date, and any open work orders — before the tech even reads a manual.

Sectioned Documentation

Manuals split into part-specific sections (page ranges, time codes, safety-critical flags). Authored once per OEM model; resolves automatically per asset.

How do I remove the divert actuator?

ASSISTANT

Divert Actuator Assembly Replacement

First: This procedure requires lockout/tagout. Do not skip it.

Here are the exact steps from the manual [1]:

1. "Turn the conveyor OFF and perform lockout/tagout."

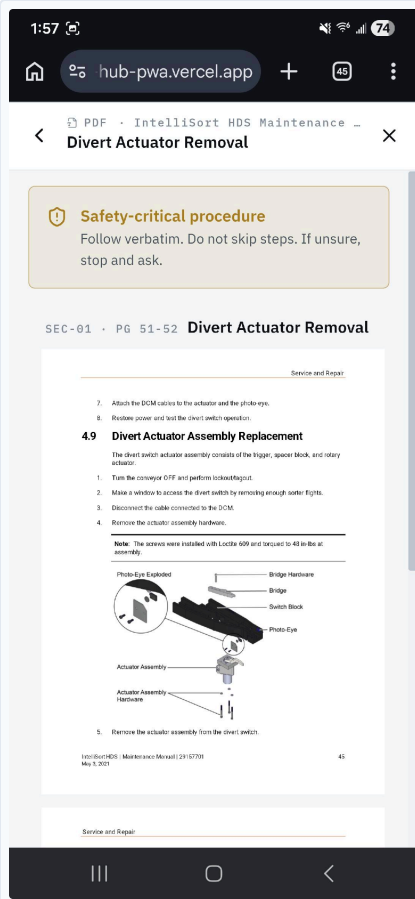

2. "Make a window to access the divert switch by removing enough sorter flights."

3. "Disconnect the cable connected

Overview Documents Training Parts Assistant

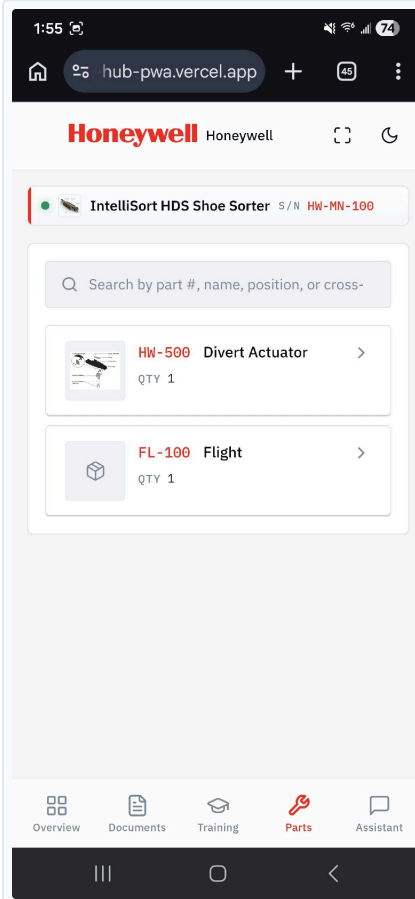

4 Procedure Viewer

Opens directly to the right page range with safety warnings prominent. Scoped to the asset's pinned content version. Every view is audit-logged for compliance.

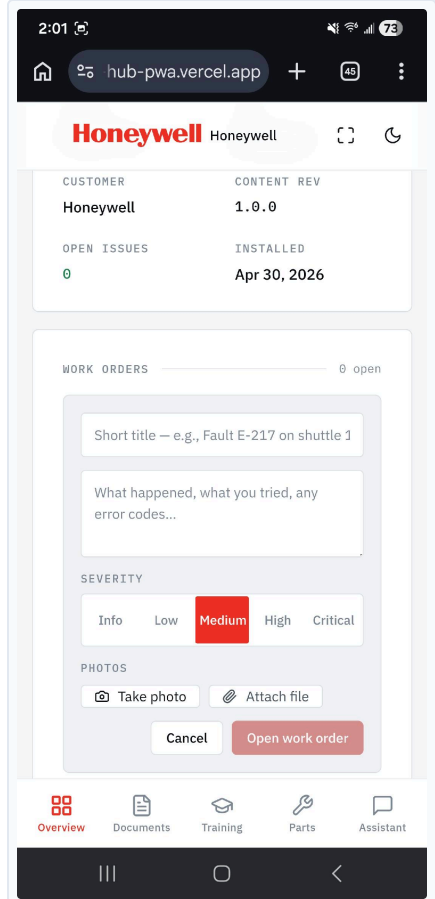

5 Parts Catalog

Searchable by number, name, position, or cross-reference. Every part links to its install procedure, exploded views, and OEM-branded ordering.

6 Report Issues

Open work orders from the floor with severity, photos, and attachments. Routes to maintenance immediately. CMMS webhook (Maximo, UpKeep, Fiix) on roadmap.

7 Field Documentation Authoring

Capture procedures right on the floor. A tech tap-titles the procedure (or speaks it via voice), then walks through each step with photos and notes — every step gets timestamped evidence. Saved as *unverified* until an admin promotes it. Turns institutional knowledge into authored content without ever leaving the equipment.
