

Sales Flow & Customer Journey

Visual Playbook — FedEx S25 Reference

May 2026

Sales Flow & Customer Journey

Visual playbook for how deals start, grow, and compound over time. Worked against the FedEx Memphis Secondary 25 (S25) project as the reference case.

The S25 reference project at a glance

FedEx Memphis Secondary 25 (S25) Sort System

End-Customer: FedEx Corporation, Memphis, TN

Integrator: DMW&H (Fairfield, NJ)

Documentation: SANTECH (5 manuals, already authored)

OEMs in the system:

- | | |
|----------------------------|------------------------------|
| ‣ Honeywell Intelligrated | – cross-belt sorter |
| ‣ Intralox | – flow splitter (ARB) |
| ‣ SICK | – vision / scan tunnel |
| ‣ Visicon (Vitronic) | – singulator vision |
| ‣ Transnorm | – power turns / merges |
| ‣ Flow Turn | – power turn conveyors |
| ‣ Talos | – transport / scan conveyors |
| ‣ Rice Lake | – cargo scale (iQUBE) |
| ‣ NORD | – gear motors |
| ‣ Baldor | – AC motors |
| ‣ Rockwell / Allen-Bradley | – PLCs, VFDs, HMIs |

Diagram 1: How S25 becomes three layered revenue streams

This is the core dynamic. One integration project at FedEx Memphis generates revenue from three different buyers across a 7-year window.

FedEx Memphis
\$80k yr-1 (disc.)
\$130k yr-2+

→

[END-CUSTOMER]
FedEx Memphis
\$130-140k/yr

ANNUAL REVENUE FROM THIS ONE PROJECT:

Y1: \$42k

Y2-3: \$392k

Y4: \$475k+

Y7: \$680k+

7-YEAR TOTAL: ~\$3.0M+ from one integration project

Key insight: DMW&H rolls off Memphis at handoff (year 3-4), but the OEM revenue compounds *forever* and FedEx takes over the operational layer. The platform never stops being paid for that equipment. **The OEM layer is the durable annuity.**

Diagram 2: The customer acquisition flow

How we actually find, qualify, and close each customer type.

Sales priority order: Start with DMW&H (already a SANTECH services customer), close 1-2 peer integrators. Use those wins to land OEMs in S25's bill of materials. Use OEM partnerships to pull FedEx in at the site level.

Diagram 3: The land-and-expand motion within DMW&H

Once DMW&H signs as the founding integrator, here's how the relationship grows.

LAND

Month 0: DMW&H signs Enterprise tier (\$90k/yr)
S25 + their other ~30 active projects in tenant

EXPAND PHASE 1 (within DMW&H)

Month 3: They author 2-3 more projects beyond S25
Asset count grows. Still in Enterprise tier.

Month 6: Sales pull DMW&H Service VP into platform
ROI conversation. Renewal de-risked.

EXPAND PHASE 2 (cross-sell to OEMs in S25's BOM)

Month 9: "Hey Honeywell, your sorter is in our platform
via S25. Your manuals are already authored.
Want to control your own content across every
Honeywell sorter in the field?"
Honeywell signs: +\$150k/yr

Month 12: Same pitch to Intralox: +\$80k/yr

Month 15: SICK signs: +\$120k/yr
Transnorm signs: +\$60k/yr

EXPAND PHASE 3 (FedEx pull-through)

Month 18: FedEx Memphis maintenance manager sees techs
scanning QR codes and asks for site-level access.
FedEx Memphis pilot tenant: +\$80k/yr (year 1 disc.)

TOTAL FROM THIS ONE LANDING (Month 18):

\$90k DMW&H + \$410k OEM + \$80k FedEx = \$580k ARR

The lesson: A single integrator landing — when paired with deliberate OEM cross-sell and end-customer pull-through — generates 5-7x its own subscription value within 18 months. **The S25 project specifically is gold because SANTECH already authored the OEM content; the OEM cross-sell pitch writes itself.**

Diagram 4: The handoff trigger — what happens when warranty ends

The most important moment in the customer lifecycle. Handle this well and revenue compounds; handle it poorly and it churns.

Mitigation for Outcome C: Push hard on OEM signups in years 1-2 (Honeywell, Intralox, SICK first). Even if both DMW&H and FedEx churn from Memphis, the OEM layer keeps paying and the equipment stays “live” on the platform.

Diagram 5: The library flywheel — S25 as foundational seed

How S25’s already-authored content makes future integrator sales progressively easier.

TODAY (S25 already authored)

Library state: 10-12 OEMs partially authored from S25
(Honeywell Intelligrated, Intralox, SICK,
Visicon, Transnorm, Flow Turn, Talos, Rice
Lake, NORD, Baldor, Rockwell)

This is the foundation library – most major MHI
projects use 60-70% of these same OEMs.

YEAR 1: First few integrator deals

New integrator signs up

Per-project authoring cost: \$30-60k
(only the OEMs not in S25's footprint)

Easier sell than from-scratch – most equipment
pre-authored from S25 baseline

YEAR 3: 20+ OEMs in library

New integrator signs up

Per-project authoring cost: \$15-30k

Faster integrator growth (10-15/year)

YEAR 5: 50+ OEMs in library

New integrator signs up

Per-project authoring cost: \$10-20k

No-brainer – sign in a week

Each new integrator becomes a vehicle for more OEM cross-sells, accelerating the loop.

The strategic implication: S25 isn't just a customer reference — it's a content seed. Every OEM signed up from S25's bill of materials makes every future integrator sale cheaper and easier.

Diagram 6: The OEM cross-sell sequence from S25

Priority order for pitching the OEMs whose equipment is in S25.

TIER 1 – Highest leverage (do first, target Q2-Q3 of Year 1)

Why: Largest installed base, largest aftermarket parts revenue at stake, biggest annual contract values

- Honeywell Intelligrated target \$150k/yr
(S25 sorter; ~thousands of similar sorters in N. America)
- Intralox target \$80-100k/yr
(S25 ARB flow splitter; massive installed base)
- SICK target \$120-150k/yr
(S25 vision tunnel; on virtually every modern sortation)

TIER 2 – Mid-size OEMs (do next, target Q4 Year 1)

- Transnorm target \$60k/yr
- Rice Lake target \$40-60k/yr
- Visicon (Vitronic) target \$40-50k/yr

TIER 3 – Specialty OEMs (Year 2)

- Flow Turn target \$40k/yr
- Talos target \$35k/yr
- NORD target \$30k/yr
- Baldor (ABB) target \$40k/yr

TIER 4 – Controls / horizontal players (Year 2+)

- Rockwell / Allen-Bradley target \$80k+/yr
(PLCs, VFDs, FactoryTalk – touches every project, potentially partner-tier deal)

CUMULATIVE OEM ARR FROM S25's BOM IF ALL SIGN:

Tier 1:	\$350-400k
+ Tier 2:	\$140-170k
+ Tier 3:	\$145k
+ Tier 4:	\$80k+
TOTAL:	\$715-795k/yr from OEMs alone

Note: You don't need to land all of them. Landing Tier 1 alone (Honeywell, Intralox, SICK) is **\$350k+ ARR from a single project's bill of materials.**

Pricing reference card

Quick-reference pricing to use in conversations.

Customer	Starting price	Typical	Top tier
Integrator	\$14.4k/yr	\$42-90k/yr	\$90-120k/yr
OEM (specialty)	\$30k/yr	\$40-60k/yr	\$80k/yr
OEM (mid-size)	\$60k/yr	\$80-100k/yr	\$120k/yr
OEM (major)	\$150k/yr	\$180k/yr	\$250k/yr
End-customer (per site)	\$80k/yr	\$130k/yr	\$150k/yr

One-time services: - Single OEM manual authoring: \$15-25k - Site overlay authoring: \$15-25k - Multi-manual project bundle (S25-style, 5 manuals): \$80-200k

Add-ons (metered): - AI chat overage: \$0.05/msg - Storage overage: \$0.10/GB/mo - Onboarding agent runs: \$250 each beyond included pool

Sales process checklist

Use this for every new prospect.

Discovery (30-60 minutes)

- ☐ Identify customer type (Integrator / OEM / End-Customer)
- ☐ Confirm fit: do they operate in MHI / industrial automation?
- ☐ Quantify scope: how many assets / projects / dealers / sites?
- ☐ Identify champion (Director of Service, VP Aftermarket, Maintenance Manager)
- ☐ Identify economic buyer (different from champion above the \$50k mark)

Demo (45-60 minutes) — use the S25 reference

- ☐ Open S25 reference — DMW&H tenant view, FedEx Memphis assets
- ☐ Show QR scan → asset hub → linked sections from S25 manuals

- ☐ Show authoring UX (PDF outline picker on real S25 manual)
- ☐ Show AI chat answering an S25 maintenance question with safety guardrails
- ☐ Show audit log + procedure evidence
- ☐ **If OEM:** show their equipment from S25 already in platform → "this is yours, with a few clicks"
- ☐ **If integrator:** show DMW&H portfolio view with S25 + neighbor projects
- ☐ **If end-customer:** show multi-OEM unified view + compliance reports for FedEx Memphis

Proposal (within 5 days of demo)

- ☐ Subscription tier recommendation with asset count justification
- ☐ Authoring services line items with library credit (where applicable — most S25 OEMs already 30-60% authored)
- ☐ Multi-year pricing option (3-year @ 15% off)
- ☐ Founding-customer terms (if early enough)
- ☐ Implementation timeline (4-6 weeks typical)

Close (target: 30-90 days for integrators, 6-12 months for OEMs/end-customers)

- ☐ Procurement / legal review
- ☐ Security questionnaire (SOC 2 roadmap one-pager)
- ☐ DPA / data-handling terms
- ☐ Signed MSA + Order Form
- ☐ Onboarding kickoff scheduled

Post-close expand (within 90 days)

- ☐ Identify OEMs in their portfolio for cross-sell (use S25 BOM as template)
- ☐ Identify end-customers for pull-through
- ☐ Schedule QBR for month 6
- ☐ Set asset-growth milestones for tier-up triggers
