## Sales Flow & Customer Journey

---

Visual playbook for how deals start, grow, and compound over time.

---

### **Diagram 1: How a single project becomes three layered revenue streams**

---

This is the core dynamic. One integration project at FedEx Memphis generates revenue from three different buyers across a 7-year window.

| TIME →                                              |   |                                     |   |                                                             |   |                                                                         |
|-----------------------------------------------------|---|-------------------------------------|---|-------------------------------------------------------------|---|-------------------------------------------------------------------------|

| ANNUAL REVENUE FROM THIS ONE PROJECT:               |   |                                     |   |                                                             |   |                                                                         |
| Y1: \$62k                                           |   | Y2-3: \$162k                        |   | Y4: \$217k                                                  |   | Y7: \$187k+                                                             |
| 7-YEAR TOTAL: ~\$900k from one integration project  |   |                                     |   |                                                             |   |                                                                         |

**Key insight:** Bastian rolls off Memphis at handoff (year 3-4), but the OEM revenue compounds *forever* and the end-customer takes over the operational layer. The platform never stops being paid for that equipment.

## Diagram 2: The customer acquisition flow

How we actually find, qualify, and close each customer type.

**Sales priority order:** Start with integrators because the cycle is short and the SANTECH reference closes the deal. Use those wins as proof points to land OEMs. Use OEM partnerships to pull end-customers in.

## Diagram 3: The land-and-expand motion within one customer

Once an integrator signs, here's how the relationship grows.

**The lesson:** A single integrator landing generates 3-5x its own subscription value in cross-sell revenue within 18 months if you work the OEM and end-customer flanks deliberately.

---

## **Diagram 4: The handoff trigger — what happens when warranty ends**

---

The most important moment in the customer lifecycle. Handle this well and revenue compounds; handle it poorly and it churns.

**Mitigation for Outcome C:** Push hard on OEM signups in years 1-2 so that even if both downstream parties churn, the OEM layer keeps paying and the equipment stays “live” on the platform.

---

## **Diagram 5: The library flywheel over time**

---

How OEM signups make integrator sales progressively easier.

### YEAR 1: Empty library

### YEAR 3: 15-20 OEMs in library

### YEAR 5: 50+ OEMs in library

**The strategic implication:** OEM signups are the most leveraged investment of sales effort because every OEM signup makes every future integrator sale cheaper and easier.

---

## Pricing reference card

---

Quick-reference pricing to use in conversations.

| Customer                | Starting price | Typical  | Top tier     |
|-------------------------|----------------|----------|--------------|
| Integrator              | \$14.4k/yr     | \$42k/yr | \$90-120k/yr |
| OEM                     | \$30k/yr       | \$80k/yr | \$180k/yr    |
| End-customer (per site) | \$60k/yr       | \$90k/yr | \$150k/yr    |

**One-time services:** - Single OEM manual authoring: \$15-25k - Site overlay authoring: \$15-25k - Multi-OEM project bundle: \$80-200k

**Add-ons (metered):** - AI chat overage: \$0.05/msg - Storage overage: \$0.10/GB/mo - Onboarding agent runs: \$250 each beyond included pool

---

## Sales process checklist

---

Use this for every new prospect.

### Discovery (30-60 minutes)

- ☐ Identify customer type (Integrator / OEM / End-Customer)
- ☐ Confirm fit: do they operate in MHI / industrial automation?
- ☐ Quantify scope: how many assets / projects / dealers / sites?
- ☐ Identify champion (Director of Service, VP Aftermarket, Maintenance Manager)
- ☐ Identify economic buyer (different from champion above the \$50k mark)

### Demo (45-60 minutes)

- ☐ SANTECH reference (existing live customer)
- ☐ Show QR scan → asset hub → linked sections

- ☐ Show authoring UX (PDF outline picker)
- ☐ Show AI chat with safety guardrails
- ☐ Show audit log + procedure evidence
- ☐ If OEM: show overlay model and parts revenue capture
- ☐ If integrator: show portfolio view across multiple projects
- ☐ If end-customer: show multi-OEM unified view + compliance reports

### **Proposal (within 5 days of demo)**

- ☐ Subscription tier recommendation with asset count justification
- ☐ Authoring services line items with library credit (where applicable)
- ☐ Multi-year pricing option (3-year @ 15% off)
- ☐ Founding-customer terms (if early enough)
- ☐ Implementation timeline (4-6 weeks typical)

### **Close (target: 30-90 days for integrators, 6-12 months for OEMs/end-customers)**

- ☐ Procurement / legal review
- ☐ Security questionnaire (SOC 2 roadmap one-pager)
- ☐ DPA / data-handling terms
- ☐ Signed MSA + Order Form
- ☐ Onboarding kickoff scheduled

### **Post-close expand (within 90 days)**

- ☐ Identify OEMs in their portfolio for cross-sell
- ☐ Identify end-customers for pull-through
- ☐ Schedule QBR for month 6
- ☐ Set asset-growth milestones for tier-up triggers
